EDUCATION

University of California, Santa Cruz

Bachelor of Science – Computer Engineering | GPA: 3.70

Sep 2020 – Jun 2024

EXPERIENCE

Software Engineer Intern

BotStacks – San Francisco, CA

Oct 2025 – Feb 2026

- Built reusable UI components and **dashboard analytics** features in TypeScript within a large-scale monorepo, integrating **REST APIs** to surface user-specific project metrics and improve data visibility.
- Designed and built the platform onboarding flow across free, pro, and team account tiers, implementing **OAuth** authentication, **Stripe** payment integration, and tier-specific user configuration in collaboration with backend engineers on PostgreSQL features.
- Centralized **50+** internal engineering documents into a **Docker**-deployed BookStack wiki, improving knowledge sharing and reducing versioning inconsistencies across teams.

Computer Science Reader

Baskin School of Engineering – Santa Cruz, CA

Sep 2023 – Jun 2024

- Evaluated weekly lab reports and provided technical feedback for **200+ students** on systems-level C projects spanning abstract data structures, path-finding algorithms, Huffman coding, and cryptographic implementations.

Tech Manager

Slug Anime and Manga Association – Santa Cruz, CA

Sep 2023 – Jun 2024

- Managed AV, streaming, and real-time troubleshooting for weekly events and SlugCon, supporting **1,000+ attendees**.
- Coordinated technical logistics and setup plans among officers, volunteers, and event partners, providing live support and assisting with sponsorship outreach to support event growth.

PROJECTS

CaseFile — React, Next.js, Node.js, TypeScript, Redis, Groq API, CourtListener API

- Built an AI-assisted legal case analysis platform that accepts arbitrary URLs, extracts **legal case metadata**, and generates structured case overviews through a **multi-stage retrieval and LLM pipeline**.
- Designed supporting workflows with **TTL-based Redis caching** to reduce redundant LLM inference and API requests while handling noisy speech-to-text transcripts.

Chromatica — React, Next.js, Node.js, Prisma & PostgreSQL, Spotify API

- Integrated **Spotify OAuth** to retrieve personalized listening data and transform API responses into dynamic visualizations driven by album artwork.
- Built a reactive interface that generated dynamic themes from extracted color palettes, turning listening data into an interactive visual experience.

SmartMirror — React/React Native, Node.js, Electron, Python, BLE, Raspberry Pi

- Contributed to a cross-functional team of **6 engineers** to design and deploy an IoT smart mirror with a companion React Native mobile app built for **cross-platform** compatibility.
- Owned **BLE integration** end-to-end — authored the Python BLE script handling all device I/O, conducted hardware research, and troubleshooted sensor and backend connectivity between the Raspberry Pi and mobile client, achieving sub-second synchronization.

LoFi Scape — React, Next.js, YouTube Player API

- Built a browser-based ambient mixing tool allowing users to blend multiple ambient soundscapes alongside lofi music streamed through the **YouTube iFrame Player API**.

SKILLS

Languages	Python, C, C++, JavaScript, TypeScript, HTML/CSS
Frontend	React, Next.js, Tailwind CSS, Vite
Backend & Databases	Node.js, Express.js, SQL, PostgreSQL, Redis, Prisma, REST APIs, LLM APIs
Tools	Git, Docker, GitHub Actions, Playwright, Linux, Vercel, Figma
